

Exception

- used for handling the error that occur in the program
- to prevent crash

try
catch
throw
throws
finally

try -> To check for exceptions generated within the block

catch -> to handle the exception

finally -> close the resources

try-with-resource -> to close the resource automatically

throw -> To generate new exceptions

throws -> exception navigation from current method to the caller method

```
try{           try(open a resource){  
  
}finally{     }  
// close  
}
```

Checked Exception

- Exception class itself and all its sub class except Runtime excetion class are all considerd as checked exception

Unchecked Exception

- Runtime exception class and its sub class are all uncheckd exception
